Epidemiology and Burden of Headache

EHF Headache Summer school in Belgrade

- Rigmor Hoejland Jensen, Professor, Dr.Med.Sci., Danish Headache Center, Department of Neurology, Glostrup Hospital, Denmark
- Conflicts of Interest: Member of advisory boards: ATI, Medotech, Neurocore, and formerly Allergan Norden. Director in LTB, EHMTIC, and vicepresident iin EHF.
Agenda

• Epidemiology
• Burden of headache
• What is good headache care
• What are the barriers
• Organization
• Strategy
• Perspectives
International Headache Classification ICHD-II

IHCD-II
14 subgroups

Group 1-4
Primary headaches
- Migraine,
- Tension-type headache,
- Cluster headache.

Group 5-12
Secondary headaches
- Medication
- Trauma, stroke,
- Neoplastic and systemic disorders

Group 13-14
Cranial Neuralgias etc
- Trigeminal neuralgia,
- Other cranial neuralgia and facial pain disorders
Headache in adults: 1-year prevalence

Mean: 50.5
Median: 50
Chronic (daily) headache in adults: 1-year prevalence

- Africa: 1.7 (1 study)
- Asia: 2.2 (3 studies)
- Australia: (no data)
- Europe: 3.4 (6 studies)
- N. America: 2.2 (1 study)
- S. America: 5.0 (2 studies)

Mean: 3.2
Median: 3.0

*Specifically chronic tension-type headache

Population or community-based surveys of >500 participants covering ages 25-60 y
EPIDEMIOLOGY
One-year period prevalence

- **Cluster Headache**: 0.01-0.3%
- **Tension-type Headache**: 15-74%
- **Migraine**: 5-15%
- **Medication overuse headache**: 1-2%

*Robbins and Lipton Sem Neurology 2010*
One year prevalence 1989-2001

1989: 79%
2001: 87%
p < 0.05

Lyngberg et al., Eur J Epidemiol 2005
Migraine

2011 Han Le: Similar increase of Frequent migraine in a 10 Year follow up study of twins

Overall 1 year prevalence
1989: 11,3%
2001: 15,5% NS

Frequent Migraine:
12% vs. 37%
p = 0.03
Frequency of headache in relation to age

![Graph showing the frequency of different types of headache (Headache, Migraine, TTH, Chronic headache) in relation to age groups (Children/youth, Adults, Elderly, All ages).]

LTB Headache Atlas 2011
Figure 1 Prevalence of migraine in boys and girls according to strict International Headache Society criteria for adults and to modified criteria (headache duration >30 min instead of ≥4 h).

Migraine incidence
Per 1000 Personyear

N=453

- Females
- Males

- Age:
  - 25-34: 7 (7) Females, 2 (2) Males
  - 35-44: 23 (23) Females, 2 (2) Males
  - 45-54: 14 (14) Females, 0 (0) Males
  - 55-64: 18 (18) Females, 2 (2) Males

Total Migraine incidence: 8.1 per 1000 Personyear
Annual migraine incidence rate

Lyngberg et al 2005
# Migraine risk factors for incidence

<table>

*Complete criteria for chronic migraine are fulfilled including individuals also fulfilling medication overuse headache (MOH) criteria.
†Complete criteria for chronic migraine are fulfilled excluding individuals also fulfilling MOH criteria.
SHIP, Study of Health in Pomerania.

Straube A et al. Cephalalgia 2010;30:207-213
Coexisting Migraine and Tension-type headache in Europe

• In the general population:
  • 66% of CTTH suffered from pure CTTH and had no coexisting migraine
  • The remaining 34% had coexisting CTTH and episodic migraine
  • No individuals with chronic migraine (without MOH) were identified

• In the tertiary headache clinic:
  • 80-95% of patients have both TTH and migraine
  • 2-5% had chronic migraine (ICHD-II)
  • 20-25% have Medication Overuse Headache-

**Prognosis** (12 year follow-up study from the general population) *(Lyngberg et al. *NEUROLOGY* 2005;65:580–585)*

**Migraine**
- Poor prognosis: > 14 migraine days/year
- % Remission: 42%
- % Good prognosis: 38%
- % Poor prognosis: 20%

**Tension-Type Headache**
- Poor prognosis: > 180 TTH days/year
- % Remission: 40%
- % Good prognosis: 45%
- % Poor prognosis: 16%

</tbody>
</table>

Analysed in multivariate models. All risk factors adjusted for age and sex.
USE OF HEALTH CARE SERVICES

Medical consultation for headache:
• 76% of subjects with coexisting mig and TTH
• 66% of subjects with pure migraine
• 44% of subjects with pure TTH

• Rates of all cause consultations and absences were higher for individuals with headache compared with subjects without headache.
• The higher rates were most markedly for those with coexisting migraine and TTH
Cluster Headache

- Diagnosis is clinical
  - Characterized by short-acting unilateral severe orbital headache attacks lasting 15-180 minutes
  - Cranial parasympathetic hyperactivity.
  - Motor activity agitation

**Episodic Cluster Headache**: Cluster periods separated by pain free periods.

**Chronic Cluster Headache**: Attacks > 1 year
Remissions < 1 month

Affects 0.1-0.3 /1000 >5000 in DK
M/F ratio: 4/1
Underdiagnosed and undertreated
9 years diagnostic delay in DK (Jensen et al 2006)
Annual costs 12.550 €/CCH patient in Germany (Gaul et al 2011)
Epidemiology Summary

- Tension-type headache is the most frequent but the least studied type of headache
- Prevalence of frequent TTH is increasing
- Prevalence of frequent migraine is increasing
- The majority of patients have coexisting Migraine and TTH

Prognosis
- Frequent episodic TTH has a fairly favourable prognosis
- Chronic TTH and coexisting migraine predict poor outcome
RELEVANCE OF HEADACHE MANAGEMENT

43 million Migraine sufferers in EU and annual cost: 43.000 million € (2010)

Migraine no.9 of most costly diseases in EU, headache no.3

Headache disorders costs more than MS, Epilepsy and PD together

Most frequent neurological disorder

Can be challenging but also very rewarding to treat

Unmet need for organization, education and better treatment

Olesen et al Cost of brain disorders in Europe Eur J Neurol 2011
What are the barriers to good headache care?

Lack of:
- Awareness
- Academic interest
- Pharmaceutical interest
- Education
- Political support
- Ressources
What are the barriers to good headache care?

Headache training

Pregraduate in Universities  4 hrs

Postgraduate for specialist 37 hrs

National H-organisations 67%
of included countries(16-76%)

Political lobbyism 13%
(5-19%)

*LTB and WHO Headache Atlas*
What is Good Headache Care?

- Qualified, trained staff
- Access to diagnosis
- Access to treatment
- Diagnostic instruments
- Balanced between under- and overtreatment
- Needs of the patients, the doctors or the society
- Equal access
- Follow-up visits
Optimizing headache care for the individual patient

- Interview
- Headache diary
- Evaluation tools
- Disability measures
- Computerized health records
- Allied Health Providers
- Others tools
MOH-patients expectations to treatment
Munksgaard et al JHHP 2010. (n=65)
**Differences in Headache Service or in Culture?**

• Undertreated/Overtreated? Similar access to care?
A proposal for stakeholder consultation prepared by a joint working group of the European Headache Federation and Lifting The Burden in conjunction with

Lifting The Burden
The Global Campaign to Reduce the Burden of Headache Worldwide

Recommendations for headache service organisation and delivery in Europe
T. J. Steiner • F. Antonaci • R. Jensen • M. Lainez • M. Lanteri-Minet • D. Valade
JHHP (E-pub ahead of print March 2011)
**Proposed Organization of Headache Service**

**Level 3: Specialised headache centres**
- Specialised Headache Center
  - both inpatient and outpatient treatment
  - Multidisciplinary treatment
  - Education
  - Research
- Organisation of networks with levels 1 and 2

**Level 2: Headache out-patient service**
- Secondary care or primary care with special interest in headache disorders
  - Completion of special training
  - Fulfills national guidelines and requirements for special headache/pain therapy

**Level 1: Headache Primary Care**
- Primary care without special interest in headache disorders
  - Following treatment guidelines
  - Selecting patients for higher levels (gate-keeper function)
  - Provide continuing long-term care after discharge from levels 2 and 3
- Network with level 2 and 3
**Good Headache Health care at Level 1. Headache Primary Care**

- Identify migraine, tension-type headache, cluster headache and Medication Overuse Headache
- Identify serious secondary headaches
- Treat uncomplicated Migraine and Tension-type headache
- Become familiar with headache diaries and calendars
- Refer the relevant and complicated patients to neurologists or headache specialists
Good Headache Health care at Level 2. Headache Specialists and neurologist

- Identify all primary headaches
- Identify most secondary headaches and neuralgias
- Treat the vast majority of patients with migraine, tension-type headache, cluster headache and MOH
- Use diagnostic instruments as headache diaries and calendars
- Refer the refractory or rare types of headache patients to academic headache centres
Good Headache Health care at Level 3
Academic Headache Centres

• Identify all primary and secondary headaches plus neuralgias
• Treat the complicated and refractory headaches
• Use detoxification programme for MOH
• Use diagnostic instruments as headache diaries and calendars
• Offer multidisciplinary treatment
• Education and teaching activities
• Research
"In a world of limited resources and competing priorities the basis of the healthcare solution for headache in most parts of the world is education"
Lifting The Burden:  
The Global Campaign to Reduce the Burden of Headache Worldwide

in collaboration with

European Headache Federation

Aids for management of common headache disorders in primary care
Dismantling the barriers for good headache service? Strategies?

- Awareness of positive treatment results
- Education of healthcare professionals
- International and national information campaigns
- Guidelines for treatment and organisation
- Collaboration with patients organisations
Perspectives

• Headache is not accepted as a very frequent and costly neurological disorder in most countries

• Increased awareness and acceptance

• Good headache care is provided

• Development of more specific treatment strategies

• Prevention of chronification and medication overuse
